DETAILED ACTION

Allowable Subject Matter

1. Claims 1-28 are allowed over prior art of record. The following is an examiner's statement of reasons for allowance: Matulich et al. (US 6188986) disclose a voice activated device for producing control signals in response to speech is self-contained and requires no additional software or hardware. The device may be incorporated into a housing that replaces a wall switch that is connected to an AC circuit. An alternate housing is portable and includes a jack that plugs into and lies flush against a standard AC utility outlet, and at least one plug for accepting an AC jack of any electronic product or appliance. The device acts as a control interface between utility power and connected electrical devices by connecting or disconnecting power to the electrical devices based on speech commands. Morrison (US 6241362) teaches a lighted display device includes three light emitting diodes therein, with each of the diodes transmitting a different one of the three subtractive primary colors of red, yellow, and blue when electrical power is applied thereto. The three LEDs are capable of collectively emitting any of the colors of the visual spectrum, depending upon the relative electrical power, which is applied separately and collectively to them. The present lighted device includes circuitry for automatically varying the relative intensity of each of the LEDs over a predetermined period of time, resulting in the LEDs collectively emitting a broad spectrum of gradually changing colors over the time period. The circuitry may be adjusted to provide for the transmission of a single color by any one or two of the LEDs if so desired, as well. The present lighted display device provides for the display of

various translucent art objects and the like, with the varying colors emitted therethrough providing a wide variety of interest as the color and appearance of the displayed object varies. Both Matulich et al. and Morrison fail to specifically disclose the main purpose of the claimed invention, that is using voice signal to control the color of the light emitted by the lighting device, and the step of combining two different colors emitted by two different light devices to form a third color that is different from the first and second colors. Furthermore, it would have not been obvious to one of ordinary skill in the art at the time of invention to modify Matulich et al. and/or Morrison in order to obtain the claimed invention. Therefore, claims 1-28 are allowed over prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
